Laser Therapy

We have a high-powered (250 Watt) Super Pulsed Laser, the Lumix 2 from USA Laser. We are seeing **rapid pain relief**, inflammation reduction, and **accelerated tissue healing** with this device. It is **completely safe** and can be used on any tissue in the body except for the eyes. It can be used for any kind of pain, acute, chronic, and neurogenic. Each session lasts anywhere from 8 to 15 minutes, depending on what is being treated.

Lumix laser therapy facilitates the natural healing responses of the body. The only “side effects” of laser therapy are the natural effects of healing – the return of function and mobility in damaged joints and muscles, the return of sensation in damaged nerves, and the reduction of pain.

Some patients experience pain relief, increased mobility, improved strength, or other symptom relief from the very first treatment, while others experience relief hours or days later; some experience relief only after the 2nd or 3rd treatment. The amount of pain or severity of injury, the amount of time since the symptom began, and the cause of the symptoms all affect the speed of results. Lumix laser therapy produces faster and more progressive pain relief than many alternative therapies. ***Healing at the speed of light!***

Therapeutic medical lasers heal tissue ailments by injecting billions of photons of invisible laser light deep into the tissues. Human tissue naturally contains protein strands called chromophores, which have the unique ability to absorb laser light energy and transform it into chemical energy. This chemical energy is used by the body to **significantly reduce pain, swelling, and inflammation**, as well as reducing tissue formation following damage from cuts, scratches, acne, burns, and post-surgery. Lumix laser therapy speeds nerve repair to restore feeling in damaged tissue and improves blood flow. It also accelerates the development of new cells for skin, muscles, blood vessels, bone, and nerves, reducing the time to return to health and activity.

We are seeing results with bursitis, carpal tunnel syndrome, edema, epicondylitis, inflammation, muscle spasms, myofasciitis, paresthesia, plantar fasciitis, neck and back pain, TMJ, disc lesions, fibromyalgia, sciatica, sprains/strains, gout, arthritis pain, and neuropathy.

Lumix laser therapy is painless, non-invasive, and does not cause any trauma or damage to the treated tissues.
